

CALL FOR ABSTRACTS

In Situ and On-Site Bioreclamation

The Third International Symposium

April 24-27, 1995
San Diego, California

Sessions will cover new developments, ongoing research applications, and case histories of various in situ and on-site bioreclamation technologies and experiences. Interested parties should submit a one-page abstract to Rob Hinchee, Battelle, 505 King Avenue, Columbus, OH 43201, or FAX 614-424-3667. Abstracts will be peer-reviewed and papers will be selected for platform or poster presentation based upon technical merit and relevance to the symposium theme. Notice of acceptance will be sent after September 1. Call (US and Canada) 800-783-6338 or 614-424-5461 for more information.

Deadline for Submission: July 1, 1994

Timothy L. Marshall (l) is the 1992-93 Phillips Fellow at Kansas State University and will receive his Ph.D. from Kansas State University in 1994. He is the vice-president of AeroSurvey, Inc., and his research interests involve the development of analytical methods and instrumentation for the analysis of complex environmental and industrial hygiene samples.

Charles T. Chaffin (r) will receive his Ph.D. from Kansas State University (1994). He is the president of AeroSurvey, Inc., a private company providing open-path FT-IR data. His research interests center around passive remote sensing using FT-IR spectrometry and extractive FT-IR measurements for environmental and industrial hygiene concerns.

Robert M. Hammaker (l) is professor of chemistry at Kansas State University. He holds a Ph.D. from Northwestern University and has served as a primary researcher at Kansas State for 30 years. His research interests are in molecular spectroscopy using Hadamard transform spectrometry, Raman spectrometry, and open-path FT-IR spectrometry.

William G. Fateley (r) is a university distinguished professor of chemistry at Kansas State University. He holds a Ph.D. from Kansas State and has served as editor-in-chief of the *Journal of Applied Spectroscopy* for 20 years. His research interests range from the development of novel analytical instrumentation to the measurement of volatile organic compounds in the atmosphere using open-path FT-IR spectrometry.
